

Valentine Agam

Miri, Sarawak | 014-6521429 | valentineagam6@gmail.com | LinkedIn | GitHub | Portfolio

PROFILE

Recent Cognitive Science graduate with hands-on experience applying Python, SQL, and machine learning to classify patterns, detect anomalies, and deliver data-driven insights to stakeholders. Built fraud-adjacent classification systems processing 1,000+ records, automated data pipelines cutting manual processing time by 60%, and produced analytical reports across recruitment and GIS domains. Familiar with Power BI, statistical trend analysis, and large-scale dataset handling. Keen interest in gaming data specifically player behaviour analysis, account classification, and abuse detection.

TECHNICAL SKILLS

- **Data & Analysis:** SQL (PostgreSQL), Python (pandas, NumPy, Scikit-learn), Excel, Power BI,
- **AI/ML:** TensorFlow, YOLO, OpenCV, anomaly detection, pattern classification, Scikit-learn
- **Database & Cloud:** PostgreSQL, Supabase, Firebase, DigitalOcean
- **Tools:** Git, QGIS, Global Mapper, n8n Automation, Power BI
- **Concepts:** Fraud detection, data cleaning, trend analysis, RBAC, OCR, computer vision, REST APIs
- **Languages:** Python, SQL, JavaScript, C++

EXPERIENCE

Data Analyst & Full Stack Developer

Miri, Sarawak | Mar 2026 – Present

- Reduced client reporting turnaround by 40% by writing SQL queries and Python scripts to automate recurring data analysis workflows, replacing manual Excel-based processes with reproducible pipelines.
- Improved data quality for 3+ client projects by performing systematic data cleaning filtering, handling missing values, and error correction before surfacing findings to non-technical stakeholders via Power BI dashboards.
- Delivered trend analysis reports and stakeholder presentations translating backend system metrics into actionable business recommendations.
- Increased application reliability by 30% by building scalable APIs with FastAPI and Supabase PostgreSQL, enabling structured data capture for downstream statistical analysis.

Junior Data & Backend Engineer (Contract) | Zenara Jaya

Miri, Sarawak | Dec 2025 – Mar 2026

- Reduced manual candidate screening time by 60% by building an AI-powered applicant classification system that identified and categorised normal vs. flagged candidate profiles using statistical pattern matching and the Claude API.
- Improved fraud and bot detection coverage by developing an anomaly identification layer that cross-referenced applicant data via SQL queries against a PostgreSQL database, flagging suspicious duplicate and bot-generated submissions.
- Ensured data integrity across 100+ candidate records by implementing structured data cleaning pipelines with OCR fallback for missing or malformed fields documented for reproducibility and team handover.
- Automated end-to-end recruitment operations using n8n workflows, cutting manual processing from 5 hours to under 2 hours per weekly cycle and generating weekly summary reports for management stakeholders.

GIS Data Analyst Intern | Sarawak Oil Palm

Miri, Sarawak | Jul 2024 – Oct 2024

- Achieved 92% detection accuracy on a large-scale spatial dataset by training custom YOLO and TensorFlow models to automatically classify soil hole anomalies applying statistical methods to distinguish normal vs flagged conditions.
- Improved field data processing efficiency by 35% by writing Python automation scripts to convert and clean FIT-to-GPX datasets, eliminating a recurring manual data-handling bottleneck.
- Produced 3D data visualisation reports and stakeholder presentations using Global Mapper and QGIS, communicating geospatial trend analysis to management for land planning decisions.
- Conducted palm census correlation studies across multi-hectare datasets, performing SQL-structured data cleaning and trend analysis before reporting insights to the GIS team

PROJECTS

Candidate Fraud Detection & Classification System - *FastAPI · PostgreSQL · Claude API*

- Designed an end-to-end recruitment data platform with automated candidate classification, anomaly flagging, and role-based data access processing 1,00+ records with full audit trail and management reporting.
- Built OCR fallback and PDF data extraction pipeline maintaining 95%+ record completeness across malformed and missing input fields

Oil Palm Anomaly Detection System - *TensorFlow · YOLO · OpenCV · Python*

- Trained custom object detection models on a large-scale spatial image dataset achieving 92% classification accuracy for anomaly detection across oil palm plantation data.
- Applied statistical image augmentation and dataset optimisation; developed automated detection-to-report workflow reducing manual inspection effort

EDUCATION

B.Sc. Cognitive Science (Minor: Computer Science) Universiti Malaysia Sarawak (UNIMAS) Nov 2025

- **Honors:** Dean's List (Year 3 Semester 2)
- **Relevant coursework:** Artificial Intelligence, Data Analysis, Statistics, Software & Web Development

AWARDS & CERTIFICATIONS

- **CompTIA Security+ (2026)** – supports understanding of access anomaly detection, account abuse patterns, and data integrity controls
- **Python for Data Science Cognitive Class** - statistical analysis, data cleaning, and visualisation techniques
- **Mobile Application Development Award** - Universiti Malaysia Sarawak (UNIMAS), 2024

LANGUAGES

English – Fluent in verbal and writing

Bahasa Melayu – Fluent in verbal and writing
